### Neck Ultrasound

#### Report

- Normal left lobe and isthmus in size, showing homogenous echo texture with normal flow on color Doppler, few small iso-echoic and colloid nodules seen.
- Right lobe is enlarged in size , heterogeneous in texture , normal vascularity, multiple iso and hyper-echoic nodules seen with cystic changes, with mild retro-sternal extension, suggestive of multi-nodular goiter.
- Few benign reactive cervical lymphadenopathies seen at both sides.
- Normal salivary glands, no SOL.
- Normal major blood vessels, no SOL
