MRI OF THE HIP JOINTS

MRI Findings:

Preserved spherical contour of both femoral heads with no evidence of avascular necrosis.

Intact both hip joints with smooth articular surfaces.

Normal appearance of the pelvic organs with no masses, enlarged lymph nodes or pelvic collections.

Preserved marrow signal of the imaged bones.

Normal MR appearance of the peri articular musculature with preserved intervening fat planes.

No effusion is noted.

Conclusion:

- ***normal MRI study of the Hip joints.***
