Idendity No	: 113466	Sample Date	: 04-06-2024 12:59:17
Birth Date	: 04-06-1964(60)	Report Date	: 6/4/2024 1:39:31 PM
Gender	: Male	Doctor	: Ibrahim Muhammed

MRI EXAMINATION OF THE CERVICAL SPINE

MRI Findings:

- Diminished cervical curvature suggesting muscle spasm.
- C6-C7 disc shows degenerative disc dehydration with posterior extrusion indenting ventral theca associated with corresponding vertebral bodies osteophytes causing compression on bilateral corresponding nerve roots at exit foramina with mild canal stenosis.
- C5-C6 disc shows degenerative disc dehydration with broad base posterior bulge indenting ventral theca causing compression on bilateral corresponding nerve roots at exit foramina , no canal stenosis.
- C4-C5 disc shows degenerative disc dehydration with posterior central and Rt paracentral disc bulge indenting ventral theca causing compression on RT side corresponding nerve roots at exit foramina , no canal stenosis.
- Normal diameters of the bony cervical spinal canal.
- Normal other discs ,No evidence of disc herniation or significant bulges.
- Normal MRI appearance of the cervical spinal cord and the cranio-cervical junction with no evidence of cord malacia, edema or syrinx formation.
- Normal marrow signal of the imaged vertebrae.
- No paraspinal signal abnormalities.
